

## HARDWARE AS A SERVICE

Your all-in-one dental office network in a box

"This is a game changer for the dental IT industry. Dentists no longer have to go to several manufacturers to fulfill their practice's IT needs: it's all taken care of in one product, the TechCentral OmniCore."

**DONOVAN GREGG,**  
**PRODUCT MANAGER**  
*Henry Schein TechCentral*

Who goes into dentistry because they love...information technology (IT)? Dentists have enough to do without worrying about things like what computer hardware to buy. If your software is out of date. If your practice is at increased risk from hackers and viruses. Whether your data backups are working well.

Henry Schein TechCentral takes the IT stress out of dentistry so you can focus your attention on the expert dental care that you provide. No more making a dental office network from à la carte IT equipment and services. TechCentral now provides OmniCore, an all-in-one dental office network that includes hardware and long-term maintenance.

### TECHCENTRAL OMNICORE

Your OmniCore computer network comes complete with a virtualized server, network-attached storage (NAS), a business-grade wireless access point and firewall and hybrid data backup, all contained in a sleek, mobile, low-profile rack that can easily be rolled into an office. With OmniCore, TechCentral will provide, monitor and maintain your network for a low, regular monthly cost that's easy to budget in, so you don't have to give the IT that runs your practice a second thought.

Stop spending time and stress trying to purchase, install and maintain your network infrastructure. Let TechCentral do that, so you can focus on your patients instead of IT issues.

The OmniCore is an all-in-one "network in a box" that is fully managed and licensed for the specific needs of your digital dental practice. For a low monthly cost, not only do you get the hardware you need for a dental office network, but TechCentral will completely manage and maintain it so you don't have IT budget surprises.

No more frustrations of trying to figure out the best network solutions; no more training a local IT provider who doesn't understand dental regulations and requirements or your imaging equipment specs. With OmniCore, your software and anti-virus protection can be updated, helping to decrease your potential exposure to security threats. Also, you can backup your important data, so it's potentially recoverable from two locations if you get attacked by a virus, hacker or even in-office theft or vandalism. OmniCore helps free you up from worrying about IT so you can get back to doing what you love — being a dentist.

## BENEFITS

### SIMPLIFIED NETWORKING INFRASTRUCTURE

IT is complicated, and dental IT is even more so. It can be overwhelming trying to make sure that you have all of the elements of a dental office IT network. With OmniCore, TechCentral has taken the work out of putting together your dental network. It simply needs to be connected to your endpoints, and you are ready to go.

### A FULLY MANAGED AND MAINTAINED NETWORK

Making sure that your operating system and software are up to date can be a very time-consuming and expensive task and takes away from your ability to focus on your patients. With OmniCore, TechCentral will monitor your network remotely for performance issues, managing and updating your critical dental practice software if required.

### SECURITY AND DATA PROTECTION

A practice can lose thousands of dollars — and valuable staff productivity — when technology failures or common internet threats compromise computer systems and data security. As part of OmniCore, TechCentral will keep your hardware up to date and encrypt your practice data, stored both locally and in the cloud, with AES 256-bit encryption, so you can have greater peace of mind.

## KEY FEATURES

### HARDWARE

- Virtualized server
- Network-attached storage (NAS)
- Uninterruptable power supply (UPS)
- Business-grade firewall
- Business-grade wireless access point
- Networking switch
- All components contained on a small/low-profile rack that can easily be rolled into an office

### SERVICES

- Hardware management
- Hardware monitoring
- Hybrid data backup
- Maintenance to all the equipment
