**HARDWARE SUPPORT PLAN
\$129 PER MONTH**

TechCentral provides expert support for the business hardware and software practices depend on most. The TechCentral team has more than 15 years of experience working with dental and healthcare networks of all sizes.

SERVER ENCRYPTION SERVICES

IS YOUR PATIENT DATA SAFE FROM DATA THEIVES?

A data breach at your practice could be devastating to your patients' security, as well as your financial stability. In addition to a damaged reputation, you could face financial damage from large fines and lost revenue.

You can take a simple step now to help protect your patient data and your practice with the TechCentral Protected Practice Server Encryption Service.

The TechCentral Server Encryption Service uses Microsoft® Bitlocker®, a full-disk encryption software that supports Advanced Encryption Standard (AES) 128 or 256-bit encryption to help protect against unauthorized access to your data at rest on your server. With an AES 128 or 256-bit encrypted server, your team can log on and access your files normally while Bitlocker® works in the background encrypting the data at rest, which can help prevent thieves from reading data from a stolen server.

HOW DOES AES 128 OR 256-BIT ENCRYPTION HELP PROTECT YOUR DATA?

Encrypting the hard drive of your server with AES 128 or 256-bit encryption helps protect your data at rest from anyone who does not have your unique key. As part of this encryption service, you also receive unique recovery keys that help protect your data from unauthorized access.

HOW SERVER ENCRYPTION WORKS

The TechCentral Protected Practice Server Encryption Service implements Microsoft® BitLocker® to help protect data when your server is powered off or stolen. Once BitLocker® is enabled on your server, the data on the drive is AES 128 or 256-bit encrypted even if the drive is moved to another machine. But if the proper key is provided, the data will be restored to its previously accessible state. With our TechCentral team supporting it, you can be assured it is backed by excellent customer service.

OUR SERVICE TO YOU

Henry Schein TechCentral offers encryption solutions backed by an experienced support team. Our customer service is also backed by the Henry Schein promise of quality customer support. Let our Protected Practice Server Encryption Service help you protect your data with BitLocker® AES 128 or 256-bit encryption technology, so you have greater peace of mind and can focus on delivering the best in patient care.

TechCentral offers you a team of technical professionals who will be there at each step to oversee the proper setup and implementation of your server encryption at your practice. Our team will:

WHAT TECHCENTRAL DOES

- 1** Provide professional onsite setup, testing and monitoring of your server. If you are purchasing a new TechCentral Server and purchase our Server Encryption Service, our team will bring your new server to your practice and transfer files from your old server to the new server. BitLocker® AES 256-bit encryption is already activated directly from TechCentral.
- 2** Assist you in setting up a Microsoft® OneDrive® account to store a copy of the key.
- 3** Provide your practice with two unencrypted USB drives containing the recovery key should you ever lose or forget it. TechCentral will not store, keep or maintain a copy of your unique BitLocker Recovery Key. You should always keep your recovery key secret, protected and stored in a safe and secure location.
